
Protecting our environment

Redrow recognises that its operational activities have an impact upon the environment. We are using our environmental management systems, which are certified to ISO 14001, to help us work towards a 'net positive' approach, where we increase our positive and decrease our negative environmental impacts.

Protecting the Environment

Our key commitments are:

• Efficient use of resources

- We will reduce our direct energy and water consumption as we work towards being environmentally 'net positive'.
- We will seek to influence the reduction of indirect energy and water consumption associated with our activities and products by engaging with suppliers and customers
- We will reduce the amount of waste we create through avoidance, reduction, reuse and recycling

• Climate change mitigation

- We will reduce our direct emissions of greenhouse gases through avoidance, reduction and renewables
- We will influence the reduction of indirect greenhouse gases associated with our activities and products by engaging with our supply chain and customers

• Preventing pollution

- We will avoid diminishing air, land and water quality through avoidance, substitution and reduction approaches
- Waste will be managed, recovered and disposed in ways that prevent pollution of the environment

• Ecology

- We will protect and enhance ecosystems, habitats and biodiversity on our developments through conservation measures and our 'net gain' approach
- We will protect ecosystems, habitats and biodiversity indirectly through responsible procurement of materials, including timber from sustainable sources.

A lifecycle Approach

We incorporate environmental considerations into the design of our homes to enable us to minimise environmental impacts across the whole product lifecycle, including procurement of materials, construction methods employed, and the end use by our customers.

Meeting Expectations

We are committed to ongoing engagement with our stakeholders to appreciate and respond to their expectations regarding environmental matters. We strive to enhance our activities and, where possible, go beyond our compliance obligation, including legal and other relevant requirements.

Progress and Reporting

We continually monitor and evaluate progress against our environmental objectives and ensure fulfilment of our compliance obligations, taking steps to correct any problems. We will continually improve our environmental management systems in order to enhance our environmental performance. We publically report on our performance using accurate, clear reporting that enables trends and comparisons to be observed.
